BluLogic®

A PATENTED DUAL-MODE-OF-ACTION (GROUP M1 + P7) FUNGICIDE/BACTERICIDE THAT PAIRS SOLUBLE COPPER WITH PHOSPHITE AT A LOW 1% METALLIC LOAD – ADDING THE SYSTEMIC REACH OF PHOSPHITE THAT CONTACT-ONLY COPPER CAN'T DELIVER, FOR COPPER-SENSITIVE SPECIALTY CROPS.

BluLogic is a dual-mode-of-action fungicide pairing low-load soluble copper with phosphite chemistry to support contact and translaminar disease management. Designed as a resistance-management rotation partner for conventional fungicides, it offers a reduced copper load compared with traditional fixed-copper products. Registered across a wide range of crops, BluLogic provides flexible use in diverse disease management programs.

BluLogic

GUARANTEED ANALYSIS

1.74% Copper carbonate (1.0% Copper (Cu) as metallic) (Group M1)

20.4% mono- and dipotassium salts of phosphorous acid (23.0% (w/w) phosphorous acid) (Group P7)

APPLICATION RATE

FOLIAR: 1-2 qt/ac

BluLogic is a dual-mode-of-action fungicide pairing low-load soluble copper with phosphite chemistry to support contact and translaminar disease management. Designed as a resistance-management rotation partner for conventional fungicides, it offers a reduced copper load compared with traditional fixed-copper products. Registered across a wide range of crops, BluLogic provides flexible use in diverse disease management programs.

- Extremely low copper load (1%) compared to conventional fixed copper products, so less copper is delivered to the environment
- Phosphite delivers systemic and translaminar activity, working alongside contact copper activity to support broader disease management
- Dual mode of action (Group M1 + Group P7) supports resistance management when used in rotation with single-site fungicides
- Registered on 60+ crops, offering flexibility across row crop and specialty crop disease programs

MIXING & HANDLING

Unlike conventional copper fungicides, BluLogic is compatible with BB5 Platinum as a tank adjuvant. Most copper products cannot be used with standard adjuvants due to reactivity. Verify with current label before recommending.

CROPS

Registered on 60+ crops, including disease programs in onions (Botrytis), apples (Fire Blight), grapes (powdery/downy mildew), potatoes (Late Blight), and tomatoes (bacterial diseases).
