SOIL | FOLIAR | BOTH

	PRODUCT	POSITIONING
FOR LIQUID PROGRAMS	Growplex™	The most consistent, highest-quality, and lowest-use rate water soluble humic acid powder on the market.
FOR LIQUID PROGRAMS	HumiK® LX	The highest-quality, premium-source liquid humic – engineered to resist fall-out so it runs clean through fertigation and liquid-starter systems.
FOR GRANULE PROGRAMS	HumiK® ONE	The most convenient way to put superior humic and fulvic acid onto the acre – a dry granule built to blend with dry fertilizer that dissolves on impact for even coverage.
FOR GRANULE PROGRAMS	HumiK® ONE Slingshot	A humic acid granule combined with a consortium of 15 P/K-unlocking, stress-mitigating, and soil-building microbes, built to blend seamlessly with MAP & DAP – unlocking 15-20% more of the phosphorus and potassium already in your soil.
FOLIAR	Chelux™ FertiBoost	A premium foliar built for the first herbicide pass, combining three proprietary bionutritional technologies for superior growth, stress tolerance, and nutrient use efficiency.
FOLIAR	KP Plus™	A soluble high-P/K powder (1-50-33) ideal for late season corn and soybeans with a built-in stress package that primes plants to fight environmental stress.
FOLIAR	Pep Up™ FX	The value plant biostimulant for broadacre corn and soybean, where premium stress products don't pencil per acre – a foliar pass that lifts nutrient uptake and eases in-season crop stress.
FOLIAR	ReadyPhos™ MnZn FX	Liquid foliar high-efficiency phosphorus (6-20-5) with manganese, zinc, sulfur, and fulvic acid – designed for cold, wet soils where chilled roots can't take up soil P.
BOTH	Nitros™	A consortium of 12 nitrogen-fixing, stress-mitigating, and soil-building microbes – delivering 10 units of nitrogen per gal while cutting synthetic N and soil salt load.
